Charlotte Moche

Frontend-leaning full-stack engineer. My fine arts background informs a genuine design sensibility. I'm experienced shipping zero-to-one features end-to-end, from component architecture to backend APIs, with a track record of owning product quality across the full stack.

Experience

Grain · Founder
Remote, NY • Sep 2026 - Present

- Designed and built a cost and inventory tracker for independent restaurants and bars, architecting the full stack from a Postgres schema through an Express/TypeScript API to a React frontend
- Built a live menu costing engine that recalculates every recipe's cost from an item's most recent purchase price, flagging recipes with missing purchase history
- Integrated Claude for receipt scanning and recipe parsing, turning a photographed receipt or pasted recipe text into a pre-filled form for the user to confirm, with client- and server-side image normalization for iPhone HEIC support
- Implemented Stripe subscription billing with webhook-driven trial and grace-period handling
- Shipped a vendor price-tracking feature that surfaces the cheapest historical price per item and totals savings when a user switches vendors

Zenith Health - Senior Full Stack Engineer
Remote, NY • July 2025 - June 2026
VC-backed startup for women's maternal health

- Architected and shipped the React Native app against a Phoenix and Elixir backend
- Leveraged agentic coding tools for system design, implementation planning, code generation, debugging, refactoring, testing, and technical documentation
- Built an admin-panel component library, establishing shared design system patterns
- Delivered end-to-end features on web, from Phoenix LiveView frontend to backend API
- Designed the conversation UX for Penny, an LLM-backed AI chat assistant
- Built realtime streaming updates for Penny, handling incremental backend events (step/coordinator updates, batched partial responses) to render progressive, low-latency UI
- Implemented PostHog event tracking and feature flags to inform product decisions and de-risk mobile and web rollouts
- Managed AppStore and TestFlight release workflows for iOS, including Apple Developer Program account setup and metadata/release notes

Peek - Full Stack Engineer
Remote, NY • Dec 2022 - May 2025
Startup offering B2B booking software and a B2C experiences marketplace (peek.com)

- Led frontend architecture and product design for core user-facing features including search, filter, and sort, shipping zero-to-one experiences with direct ownership over interaction design and technical decisions
- Drove a 12% uplift in booking conversion through A/B-tested UI improvements
- Delivered scalable, full-stack booking features supporting thousands of operators and millions in annual bookings

- Utilized Sentry to monitor and triage production errors, improving site reliability
- Built and maintained a comprehensive test suite that measurably reduced production bugs
- Migrated legacy codebase to Phoenix LiveView, implementing WebSocket-based server-side rendered UI for real time updates

Changing Room - Front End Engineer
Remote, NY • July 2021 - Jan 2022
Early-stage startup focused on making sustainable fashion discovery more accessible and transparent
- Developed interactive frontend features
- Created a personality quiz and custom popups to increase user engagement
- Collaborated with backend and UX teams to build tools for environmental transparency

Raphael & Raphael LLP - Front Desk Staff
Boston, MA • Nov 2019 - Nov 2020
Accounting firm
- Greeted clients and managed high volume communication during tax season
- Organized and processed client documents
- Maintained office supplies and coverage during peak season

La Morra - Staff
Boston, MA • Apr 2014 - Dec 2019
Fine-casual Italian restaurant
- Managed, compiled, and created content for Instagram account, including photographing produce and dishes and writing captions
- Designed event advertisements with photoshop to send out to guests via email list
- Cooperated with owners for steps and flow of service, helping organize private events, supervising treatment of patrons, and quality of food plating before leaving the kitchen
- Wore many hats over the years, from server to host to managing the floor

---

Solo Projects

iOS Developer (Solo Project) · Prelude
Remote, NY • Nov 2023 - Present
- Designed and built a SwiftUI app from scratch to visualize personal Spotify listening data

---

Education

Massachusetts College of Art and Design
Bachelor of Fine Arts

Actualize Coding Bootcamp
Certificate in Full Stack Web Development
